

Mobi[®] EV Charger for the Workplace

The Flexible Solution to Meet Employee Electric Vehicle (EV) Charging Needs

As sales of electric vehicles continue to grow, EV charging stations in the workplace have become a valuable incentive — or even expectation — for employees. However, limited access to EV charging can quickly turn this workplace benefit into a burden as employees waste valuable time competing over shared spots. Organizations require a charging solution that easily integrates into their facilities while delivering the optimal charging experience to recruit and retain employees. When scaling EV charging access at your site, consider the unique requirements of the facility and the needs of employees.

Charging Deployment Considerations

Facility Manager:

- If you're leasing a facility, is approval from the property manager necessary for construction?
- Can you wait weeks to months for fixed charger permitting and construction?
- How do you ensure you're complying with ADA parking requirements and other local regulations?

Employee Needs:

- Will charging my EV be easy and convenient at my office?
- Will I need to repark my car to access a charger and interrupt the work day?

The Solution

The Mobi EV Charger is a battery-powered solution that can be quickly deployed without any infrastructure upgrades. It moves to meet driver demand and can charge up to nine cars per working day. Employees simply follow the steps below for fast, flexible EV charging.

STEP 1

Park anywhere. Drop a pin at the EV location on the FreeWire app

STEP 2

A designated attendant drives a Mobi to the EV and delivers a charge

STEP 3

A text is sent when charging is complete. No further action needed by employee

The Benefits for Facility Managers

Quick Deployment: begin charging on day one rather than in several weeks. Mobi allows for immediate deployment without any costly electrical upgrades

Location Flexibility: deploy and scale a mobile solution to any lot — large or small, leased or owned

Lower Total Cost of Ownership: start saving immediately on current and future energy costs with off-peak charging and no demand charges over your Mobi's long lifespan

The Benefits for Your Employees

Happy, Productive Employees: boost productivity by eliminating charging conflicts. With Mobi, each employee can reclaim up to five full working days per year in time saved

Park Anywhere: get easy access to chargers when any parking spot can be a charging location

Employee Incentive: feel supported by your company

"Ever since my company purchased Mobi EV Chargers, I no longer have to think about checking multiple times a day to find an available charger or moving my car once it's charged."

— Susan, EV Driver, Sunnyvale, CA

Future-Proof Solutions

FreeWire Technologies helps leading organizations' growing need for rapid, cost-effective EV charging by providing a mobile solution that integrates with existing electrical infrastructure to charge EVs whenever and wherever needed. Setup is simple and can be done without permitting or construction, allowing for immediate deployment and scalability. Mobi EV Chargers are supported by a robust software platform for intelligent power and asset management. Both facility managers and employees benefit from an easy, driver-centric charging service at their workplace.
